ECR 9816

PLEASE READ CAREFULLY BEFORE PROCEEDING

KITS 74000/74000EZ (REQUIRED TO INSTALL PINK IGNITION WIRE FOR PROPER OPERATION)

Thank you for purchasing this product. Due to electronic component shortages which continue to impact businesses, there has been a change to this kit from the original design. This is a temporary change that does not affect the quality or function of the system. The original system configuration will return soon.

The motion-based “wake up” feature of the manifold has been removed. The system will only become active upon connection with a Bluetooth device (controller/smart phone) or when ignition is turned on. Therefore, connecting the pink wire to an ignition source is now required, varying from the details on page 5 of your manual, which states this as an option. A proper ignition source will have a constant 12V when the key is turned on.

Please see the table below for changes to your kit from the details noted in your installation guide. Note that there are no visible changes to the WirelessAir manifold. The necessary hardware to ensure proper operation has been provided.

MANUAL HARDWARE LIST

A	72710	WIRELESSAIR MANIFOLD	1
---	-------	----------------------	---

PROVIDED HARDWARE LIST

A	72713	WIRELESSAIR MANIFOLD	1
B	24503	FUSE 3A ATM	1
C	24501	FUSE HOLDER ATM	1
D	24661	BUTT SPLICE (14-16GA)	1
E	24524	TERMINAL SPADE .187"	1
F	24594	TERMINAL SPADE .250"	1
G	24561	ADAPTER ATM FUSE	1
H	24542	ADAPTER ATC FUSE	1

See the wiring integration instructions below for connecting to an ignition circuit found in most fuse boxes.

If your kit came with this Service Bulletin (SB-303) or your manifold is part number 72713, **you will be required** to follow the installation instructions noted in SB-303.

If your kit **did not** come with SB-303 and your manifold is part number 72710, please proceed with the normal installation, as outlined in your installation guide (MN-1092 or MN-1100).

WirelessAIR™ EZ Mount™

Kit Number
74000EZ

EZ Mount Compressor System

Introduction

WirelessAIR™ EZ Mount™ combines a manifold and compressor into a single, easy-to-install unit, along with wiring harness and accessories needed to connect to vehicle power and air springs (purchased separately).

It is important to read and understand the entire installation guide before beginning installation or performing any maintenance, service or repair. The information here includes a hardware list, step-by-step installation information and safety information.

USING THE SYSTEM

Refer to the WirelessAIR User Guide included with this kit to learn how to operate the system.

NOTATION EXPLANATION

Hazard notations highlight information that must be observed to help minimize risk of personal injury or possible improper installation, which may render the vehicle unsafe.

⚠ DANGER

INDICATES IMMEDIATE HAZARDS WHICH WILL RESULT IN SEVERE PERSONAL INJURY OR DEATH.

⚠ WARNING

INDICATES HAZARDS OR UNSAFE PRACTICES WHICH COULD RESULT IN SEVERE PERSONAL INJURY OR DEATH.

⚠ CAUTION

INDICATES HAZARDS OR UNSAFE PRACTICES WHICH COULD RESULT IN DAMAGE TO THE MACHINE OR MINOR PERSONAL INJURY.

TOOLS LIST

Description.....	Qty
Power drill.....	1
3/8" Drill bits.....	1 ea.
3/8", 1/2", 5/16", 9/16" Sockets and ratchet	1 ea.
Wire stripping/crimping tool.....	1
Sharp razor knife	1

HARDWARE LIST

Item	Part #	Description.....	Qty
A	73006	Wireless controller	1
B	26564	EZ Mount assembly	1
C	20946	Air line (1/4")25 ft.
D	26897	Wiring harness	1
Hardware Pack			
E	21838	Tee 1/4" PTC	2
F	24652	ATC fuse, spade 15A	1
G	24752	Heat shrink butt splice 10-12 ga	2
H	24500	Fuse holder ATC/ATO	1
I	10466	8" Zip tie	18
J	24748	3/8" Ring terminal 10-12 ga.....	1
K	11104	U-bolt.....	1
L	18435	3/8"-16 Nylon lock nut.....	2
M	18444	3/8" Flat washer.....	4
N	17188	3/8"-16 x 1 1/4" Hex cap bolt.....	2
O	17102	5/16"-18 x 3/4" Self-tapping hex screw	2
P	10868	Tree mount.....	3
Q	24661	Heat shrinkable butt splice 14-16 ga.....	1
R	24681	3/8" Ring terminal 14-16 ga.....	1

SUGGESTED COMPONENT LAYOUT

This guide should be used as a general reference (Fig. 2). The layout may need modification based on the application.

- Ideally, EZ Mount should be mounted in the middle of the vehicle in the zone marked by the yellow square to optimize the wireless performance.
- Avoid routing air lines and wiring near sharp edges. If passing air lines or wiring through holes in the frame, use rubber grommets. Support wiring and air lines every 8-12" (200-300mm) with zip ties or other means.
- Keep wiring, air lines and EZ Mount at least 6" away from heat sources such as the exhaust.

CAUTION

DO NOT MOUNT EZ MOUNT WITH THE LOGO UPSIDE DOWN OR THE LOGO FACING THE GROUND (FIG. 1).

DO NOT HANG EZ MOUNT FROM A HORIZONTAL SURFACE USING SELF-TAPPING SCREWS.

PLACE THE COMPONENTS AND ROUTE THE AIR LINES AND WIRING HARNESS TO AVOID HEAT SOURCES SUCH AS THE EXHAUST SYSTEM.

PROTECT AIR LINES AND WIRING WHEN ROUTING NEAR SHARP EDGES.

LOCATE EZ MOUNT IN AN AREA OF THE VEHICLE WHERE IT WILL BE SHIELDED FROM DIRECT SPLASH. EXCESSIVE MOISTURE CAN DAMAGE THE COMPRESSOR AND CAUSE SYSTEM FAILURE.

REMOVE ALL FUSES WHEN JUMP-STARTING OR WELDING ON THE VEHICLE. FAILURE TO DO SO COULD DAMAGE THE MANIFOLD.

TO KEEP VOLTAGE DROP WITHIN INDUSTRY STANDARDS, DO NOT EXTEND WIRES. EXTENDING THE WIRES COULD DECREASE COMPRESSOR LIFE.

Wiring to the battery

CAUTION
 INSTALL THE FUSE AFTER ALL CONNECTIONS ARE MADE.

OPTIONAL Ignition Source Connection

Connect the pink wire to any wire that is active when the ignition is on. This will allow WirelessAIR to only make adjustments when the ignition is turned on. Otherwise, the system will only activate when the vehicle moves or when woken up by the controller or mobile app. Hardware to connect to the ignition is not included. This is a low-amperage circuit that should be connected to the output side of a 10A or smaller fuse-protected circuit.

CAUTION

INSTALL COMPRESSOR INLET FILTER IN A DRY LOCATION. ENSURE THAT THE FILTER IS MOUNTED POINTED UP WITH THE HOSE ROUTED DOWN.

To keep voltage drop within industry standards, do not extend wires. Extending the wires could decrease compressor life.

The frame width for using the U-bolt must be 2 1/4"-3 3/4" (57-95mm). Frame height must be 7 1/2"-8 1/2" (191-216mm).

EZ Mount (Manifold & Compressor)

Hex cap bolt torque
 21-25 lb.-ft. (30-34Nm)

U-bolt torque
 4-6 lb.-ft. (5.4-8.1Nm)

Self-tapping screw torque
 No torque spec is provided for self-tapping screws because there are too many variables.

UNACCEPTABLE MOUNTING ORIENTATIONS

fig. 1

fig. 2

Installing WirelessAir EZ Mount

1. There are three choices for mounting:
 - Hex cap bolts (N) with flat washers (M) and nylon lock nuts (L).
 - U-bolt (K) with washers (M) and nylon lock nuts (L). See Figure 3 for U-bolt installation.
 - Self-tapping screws (O).
2. EZ Mount can be mounted in any orientation except with the logo upside down or the logo facing the ground (Fig. 1). There are mounting holes in the side of the bracket and in the top. Use the included template (Fig. 4) for mounting with self-tapping screws or hex cap bolts. Use a 1/4" drill bit to make pilot holes if using self-tapping screws.

U-bolt installation

fig. 3

⚠ CAUTION

BEFORE DRILLING, ENSURE THAT THE BACK SIDE IS CLEAR OF VEHICLE COMPONENTS, INCLUDING BRAKE LINES, FUEL LINES, AND WIRING.

3. Do not remove components from the EZ Mount assembly.

REMOTE FILTER INSTALLATION

1. Screw 1/4" FNPT x 1/4" barbed tube fitting onto inlet air filter, hand-tighten. No thread sealant needed.
2. Attach 1/4" air line, provided in the filter pack, to barbed tube fitting on remote inlet air filter.
3. Locate appropriate area where remote inlet filter is to be installed. Keep in mind that location should be dry and away from heat source, and that the air inlet slots on the inlet air filter are free from blockage.
4. Secure remote filter appropriately using proper fastening methods or drill a 3/8" mounting hole and push remote filter bracket pin into the mounting hole.
5. Route air line to inlet port of the compressor. Measure and cut squarely to appropriate length (Fig. 6). Make sure when routing you keep away from sharp edges and you allow for proper bend radius to avoid kinking.
6. Attach cut end of 1/4" air line to barbed tube fitting of air inlet port on compressor.

DRILLING TEMPLATE VERIFICATION

⚠ CAUTION

IMPORTANT: PRINT THIS PAGE AT 100% SCALE. THIS IS A DRILLING TEMPLATE, WHICH WOULD BE RENDERED INCORRECT IN DIMENSION IF PRINTED WITH ANY SCALING. USING AN INCORRECT TEMPLATE TO DRILL HOLES MAY CAUSE DAMAGE TO THE VEHICLE! PLEASE REFER TO THE ONE-INCH OR 1CM SCALES AND USE A MEASURING TOOL TO CONFIRM THAT THE PRINTED SCALE MEASURES 1" OR 1CM TO VERIFY THAT THE TEMPLATE HAS BEEN PRINTED AT 100% SCALE.

SIDE

TOP

fig. 4

AIR LINE AND WIRING CONNECTIONS

1. Route and install an air line (C) from port 1 of the manifold to the driver's (left) side air spring. Route and install an air line (C) from port 2 of the manifold to the passenger's (right) side air spring (Fig. 2). Install tee fittings (E) and schrader valves if manual inflation is desired (Fig. 2). To ensure a proper and clean cut, see *Cutting the Air Lines*.
2. Route the wiring harness (D) along the frame and make all wiring connections (Fig. 2).
3. Cut off the terminals on the red and black compressor wires and connect to the short red and black wires on the wiring harness (D) using butt splices (G) (Fig. 2). The ground wire cannot be grounded to the chassis and must be connected to the harness. Finish by connecting the wiring to the battery. Wait to install the fuse.
4. Attach the wiring harness to the top (preferred) or bottom of the EZ Mount bracket with tree mounts (P) and zip ties (I) (Fig. 5).

5. Connect the wiring harness (D) to the manifold (Fig. 2). Press the connector on completely and listen for an audible “click.” Press white lock on connector toward manifold to lock connector in place. Ensure a proper drip loop exists to prevent water intrusion (Fig. 6). Install the fuse (F) last. The system will automatically fill to 5 PSI (.34BAR) once the fuse is installed.

CUTTING THE AIR LINES

Use a sharp knife or a hose cutter and make clean, square cuts (Fig. 7). Do not use scissors or wire cutters because these tools will deform the air line. Do not cut the lines at an angle. The minimum bend radius for 1/4" air line is 1" (25mm). Air lines are to be installed straight into fittings. Inspect the air line for scratches that run lengthwise. Contact Air Lift customer service if the air line is damaged.

fig. 7

To watch a video demonstrating proper air line cutting, go to air-lift.co/cuttingairline.
